**Drew Clausen**  
CSI

### EXECUTIVE DIRECTOR

**Beth Winkler**

## Networking in the Virtual Space

### Andrea Baird

NCARB, P.E., BECxP, CxA+BE, CCCA, LEED AP BD+C

I am proud of how our Chapter has been able to pivot our typical programming and provide relevant content in a virtual format. We held our first virtual happy hour on April 15th, hosted by Brad Schwab. While networking in this format feels different, it has offered some opportunities that we would not have if meeting in person. It has been a privilege to meet some of your pets, children, and partners.

Scott Conwell organized an excellent program on April 24th about how to lead when your team goes virtual. We had CSI members from around the country join us for this event, allowing for interaction that we would not otherwise have. CSI Chicago continues our tradition of leadership and innovation because of our excellent members.

The board will continue to work to provide value for your membership as we navigate the next few months. Until we can meet again in person, I encourage you to be brave, peel back the tape over your computer camera, and join us for the next members only happy hour on May 13 ([sign up link on page 6](#)).

## Member Virtual Happy Hour

Wednesday, May 13, 5:00 - 6:00 PM

Join your fellow members for a virtual happy hour!

We had a blast connecting at our first happy hour so we are doing it again. You are invited to a complimentary virtual happy hour on Wednesday, May 13th from 5:00pm – 6:00pm.

Our happy hour is designed to be an unstructured time to connect with other chapter members –so whether the conversation is about your pets, your work, or your work out, bring your favorite beverages and snacks and together we'll share experiences via Zoom Meeting – all while maintaining appropriate social and physical distance. Register and save your spot today!

### REGISTRATION

## Reminder On In-Person Events

As the health and safety of all CSI Chicago members and guests is of the utmost importance we will not be holding in person events at least through June 30, 2020. Our leadership will be monitoring the situation in Chicago and will resume in-person meetings when it is determined safe to do so.

## Rebuilding Together Work Day Still Pending

Rebuilding Together Metro Chicago had made the decision to postpone the April 25 home rebuild day until further notice ([Read statement here](#)). As planning resumes, we will be sure to notify members of donation and volunteer needs.

## Awards & Recognition Night Postponed

In the interest of health and safety of members and their guests, the May 20 Awards & Recognition Night has been postponed until later in 2020. We will notify all members of the new date once it is established.

**MAPEI's warranted waterproofing solutions for balconies**

**Issues:**  
Weather, salts, efflorescence

**Solutions:**  
Freeze/thaw- and submersion-resistant mortars, efflorescence-resistant grouts, expansion joints and a Mapethene waterproofing system

- Concrete
- Mapebond™ 700, Mapebond 710 or Mapebond 720 adhesive
- Mapethene™ HT or Mapethene LT sheet waterproofing
- Mapedrain™ 30, Mapedrain 35 or Mapedrain 50 drainage composite
- Modified Mortar Bed
- Mapelastix™ 315 (with Fiberglass Mesh) or Mapelastix AquaDefense waterproofing membrane
- Kerabond™ T / Kerastix™, Kerabond / Kerastix™ or Granirapid™ mortar system
- Ceramic or stone tile
- Ultracolor™ Plus FA or MAPEI Flexcolor™ CO grout
- Mapesil™ T 100%-silicone sealant
- UltraCare™ Penetrating Plus Stone, Tile & Grout Sealer penetrating sealer

Balconies can be challenging environments for tile or stone installations – whether over occupied or unoccupied space.

MAPEI offers waterproofing systems solutions from the substrate up. Best of all, these solutions qualify for MAPEI's Best-Backed™ system warranty, giving architects peace of mind when specifying MAPEI products.

## CSI Chicago Annual Report Given

Our Chapter Annual Report and election results were presented through a Zoom meeting by President Andrea Baird on Tuesday, April 21, 2020. Andrea informed members on the status of the Chapter's current events, committees and financial state. At the end of the meeting she also presented the results of the 2020 chapter election.

Chapter members may request a copy of the annual report by e-mailing Beth Winkler at [administration@csichicago.org](mailto:administration@csichicago.org).

## Get Signed Up To Get Involved

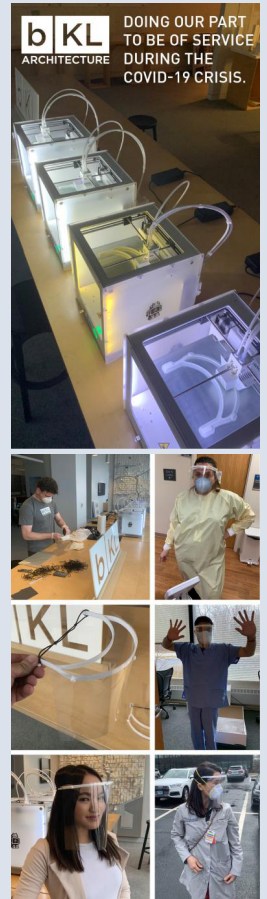

As we are all apart, the 2020-2021 leaders are getting geared for the next fiscal year to start on July 1. Our leaders are looking for members who want involved by serving on a committee. Getting involved connects you with more of your fellow members and your efforts fuel things like educational speakers, social time where members connect, or our social media and newsletter content. Please share your committee interests by submitting the committee interest form today.

[VOLUNTEER FORM](#)

## CSI Chicago Foundation Supports COVID-19 Face Shield Initiative

Supporting our community is top priority of our chapter, which is why the CSI Chicago Chapter and Foundation board agreed that a \$1,000 donation from the CSI Chicago Foundation to bKL Architecture's COVID-19 Face Shield Initiative would be a great way to support our local community in this time of need. bKL Architecture is using their resources to 3D print, assemble, and deliver face shields to the local medical community. They are using donated funds to purchase additional 3D printers and the materials need to fabricate the face shields. All 3D printers purchased using contribution funds will be donated to Chicago Public Schools and Chicago Public Library once the COVID-19 crisis has passed and/or PPE is more accessible. Learn more about this initiative on their Go Fund Me page.

## Critical Points of Ceramic Tile Design and Installation: Mortar Bed (Mud) Floors and Walls

Written by: Scott Conwell, FAIA, FCSI, CDT, LEED AP

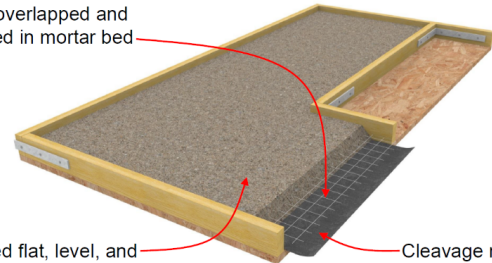

The age-old method of laying tile floors and walls in setting beds built up of sand, cement, and sometimes wire or lath reinforcement over the floor or wall structure is a work technique that has declined in recent years as thinset mortars and thinset installation methods have been improved and become more prevalent. However, mortar bed

techniques for installing tile will never disappear completely as they remain appropriate for certain types of applications such as heavy duty areas of use, cases where the variable thickness of the mortar (mud) bed is appropriately used to correct an irregular substrate, and other instances where the design professional or building owner has a preference for this classic method of installation. Design professionals and specification writers should have a basic understanding of mud floors and walls and should require the installing contractor to meet minimum qualification requirements for this specialized type of work. This article will examine the components of mud work including installer qualification criteria.

A cleavage membrane is component often specified in mud work to provide a bond break in floor and wall assemblies if differential movement is expected between the tile assembly and the substrate. Cleavage membrane materials vary, but

Wire reinforcement properly overlapped and suspended in mortar bed

Mortar bed flat, level, and thickness as specified

Cleavage membrane intact and properly overlapped

they are often paper-based, delicate, and easily damaged. A qualified tile installer will take care not to tear, puncture, or otherwise damage the cleavage membrane during the installation process, and if damage does occur, the installer will replace and reinstall the material. Floors and walls both require minimum overlaps in the cleavage membrane, generally 4 in. (100 mm) for floors and 2 in. (50 mm) for walls; and the laps at walls must be applied shingle-fashion. Failure to install the cleavage membrane to these criteria may result in ineffective bond break or moisture intrusion into the wall or floor structure.

Reinforcement is a component that is generally required within mortar bed floors and walls to impart flexural strength, to control shrinkage of the mortar and prevent cracking, and in the case of walls, to support the vertical mortar bed. Proper installation of galvanized wire mesh reinforcement in mud floors is a critical skill that is always within the work scope of tile installers. Installation of metal lath on a wall's structural backing often falls outside the scope of a tile installer's work, but it is a related skill that tile installers must at least have knowledge of since it affects the performance of the tile assembly, and in some cases the lath installation does fall in the tile work scope.

In order to function properly, the reinforcement and lath must be continuous (except at inside corners of walls) and properly

*Article continued on the next page.*

## Critical Points of Ceramic Tile Design and Installation: Mortar Bed (Mud) Floors and Walls

(Continued from previous page)

lapped by 2 in. (50 mm) minimum. In the case of walls, the lath must be installed shingle-fashion. At inside corners of any mud wall, the lath must terminate at the corner, allowing a small gap in reinforcement to allow for independent movement of each wall and directing cracks to the vertical perimeter expansion joint of the tile assembly. The positioning of the reinforcement in mud floors is critical to the performance of the floor. If the reinforcement is too high or too low from the center of the mortar bed, its ability to add flexural strength and adequately reinforce the system may be compromised. Skilled tile setters are expected to maintain the vertical position of the reinforcement in the center 1/3 of the mortar bed. Similarly, the fastening pattern of the metal lath on walls must be installed and spaced as specified.

While installation of the cleavage membrane, reinforcement, and lath is important, the primary task faced by installers of mud floors and walls is to properly float the mortar beds flat, level, plumb, and to the specified thickness. The ability to float floors and walls accurately is a true skill that takes years to master, and it is the hallmark of a skilled tile installer. A good tile installer is trained to float the mortar to the proper thickness at key benchmarks, and to vary the thickness as necessary to correct substrates that are out of flat or out of plumb. At walls, installers must float inside and outside corners that are plumb,

as well as maintain plumbness within tolerance in the field of the wall. Dimensions of wall mud must be accurate per the construction documents in order to maintain accurate finish dimensions. Mud floors must be flat and level upon completion, and ready to receive a tile finish. Each of these skills is critical for mortar bed installations.

Installation of tile in a mortar bed may be considered a specialty skill today, but the ability to work with mud is a skill still taught at the preapprentice level by International Masonry Institute. Proficiency in mud work is a hallmark of a BAC union tile contractor. One way design professionals can be assured of mud work that meets industry standards and best practices is to include a requirement in the Quality Assurance paragraph in Section 1 of the Tiling specification that the tile installers be certified via the Advanced Certifications for Tile Installers (ACT). ACT is an industry-wide certification program developed by TCNA (Tile Council of North America) and their manufacturer members, TCAA (Tile Contractors Association of America), IMI (International Masonry Institute), IUBAC (International Union of Bricklayers and Allied Craftworkers), NTCA (National Tile Contractors Association), and CTEF (Ceramic Tile Education Foundation). Visit [www.tilecertifications.com](http://www.tilecertifications.com) for more information.

This article is adapted from a previous article by the same author appearing in the Spring 2020 issue of the Tile Contractors Association of America (TCAA) 9300 Contractor magazine.
